

K2 REPLICATION FOR ORACLE DATABASES

Kaminario's K2 all-flash array includes native replication with the ability to deliver an enterprise-class, disaster recovery solution for Oracle database environments. With sub-minute RPO and sub-second RTO, K2 supports **application-consistent** snapshots and easy integration with any platform using RESTful APIs. Oracle Database customers can leverage the K2 platform to automatically stream consistent copies of production Oracle Database environments to remote sites for Dev/Test, QA and more. K2's proven snapshot architecture enables native replication for Kaminario customers with no additional software licenses.

All-Flash Datacenter Infrastructure for Oracle Database Environments

-  No extra licensing needed
-  Cost-efficient all-flash DR
-  Save on WAN costs
-  Sub-minute RPO
-  Sub-second RTO
-  Instant DR testing
-  Native integrated feature
-  Snapshot-based
-  Replicate worldwide
-  Application-aware
-  Easy to manage
-  Fully automated
-  Performance optimized across any distance
-  No impact on production
-  Across-site efficiency
-  Data-reduction on the wire
