### Key Benefits

- **Ensure all of your business critical application data is protected** at the right RPO and RTO and harness the power of the cloud.
- **Simplify test and development processes** for migrations, upgrades, and patch management.
- **Save up to 70% on backup storage costs.**
- **Protect against outages** from human error, data loss, and logical corruption.
- **Efficiently migrate data** to, from, and across your multi-cloud infrastructure.

### How We're Unique

- **Application-Centric** - We provide complete cloud protection, mobility, and rich data services
- **Cloud Scale** - We are elastic, scale-out software built for multi-cloud
- **Semantic Deduplication** - We deliver up to 70% reduction in secondary storage costs.

### About Datos IO

Datos IO delivers a radically novel approach to data management helping organizations embrace the cloud with confidence by delivering solutions that protect, mobilize, and monetize their data — at scale.

Unlike traditional data protection solutions that protect applications either at a VM-level or at a storage LUN-level, Datos IO has reinvented data protection by eliminating any dependencies on VM or LUN constructs — thus, enabling a true application-centric data management approach. This revolutionary application-centric approach provides customers with dramatic backup storage efficiency, provides data management services at a granular level (e.g. rows/tables vs. entire VM or entire database), and enables customers to intelligently move their applications back and forth between public clouds or across cloud environments. Backed by Lightspeed Venture Partners and True Ventures, Datos IO is headquartered in San Jose, California. To learn more, please visit <http://datos.io/> and follow us on Twitter at @datos\_io.

### RecoverX Overview

DatosIO RecoverX is elastic data management software that provides application consistent backups, orchestrated and automated any point-in-time recovery, and industry-first semantic global deduplication. With RecoverX enterprises of any size can protect their data at any granularity and at any point in time (flexible RPOs), reduce downtime with recovery in minutes (low RTOs) not hours, save up to 70% on backup storage costs, and efficiently mobilize their data to, from, and across clouds empowering customers to harness the cloud for both traditional and next generation application data protection and management.
