

Host PowerTools™

Host PowerTools simplifies the management of servers and storage and enables different IT teams to work together more easily to provide greater data access and availability.

Ensure Configuration Readiness and Self-healing

Verifies that servers and storage are configured correctly and provides insight to automatically fix any configuration issues before they cause performance or availability problems.

Manage More Easily

Provides a consistent user experience with GUI and CLI across all supported platforms including Linux, Unix, Windows, and VMware.

Break Down Barriers Between IT Teams

Enable better visibility and understanding of storage objects between the server and application teams.

Enable Self-service of Routine Storage Operations

Empowers storage administrators to enable selfservice of storage provisioning, snapshot and restores to the server or application teams.

Secure Provisioning

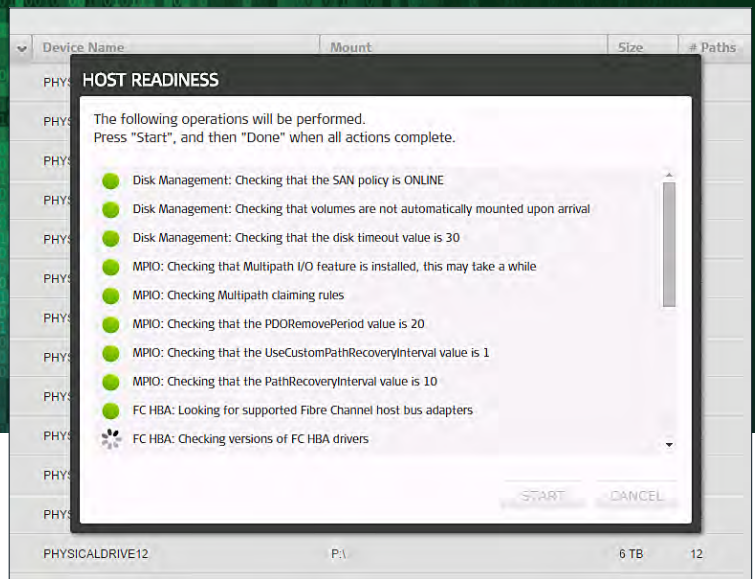

Securely provisions and manages storage resources from the application servers for all major OS, virtualization, and application platforms.

Streamline VMware Operations

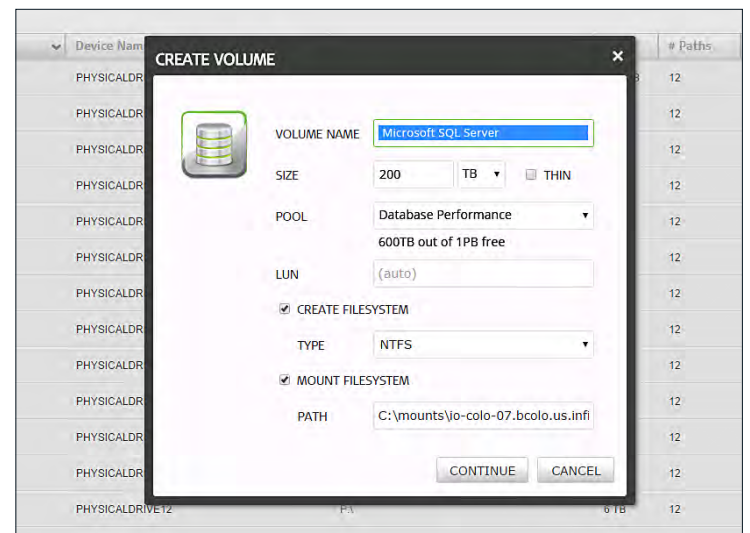

Enables consistent snapshots and self-service restore capabilities plus thin capacity reclaim.

Maximize Value

Host PowerTools incurs no extra charge as it is included with your InfiniBox enterprise-proven storage array.
