Orders for the continuation of term licenses and/or maintenance will be required if the term licenses and/or maintenance is to be continued during the subsequent period.

6. CONVERSION FROM TERM LICENSE TO PERPETUAL LICENSE

Conversion from term licenses to perpetual licenses for any or all Software is not available under the scope of this contract. Outside the scope of this contract, the Ordering Activity may contact the Manufacturer directly to discuss the permissibility, costs and operation of such conversion(s). Contractor agrees to reasonably assist Ordering Activity in this regard.

Notwithstanding the forgoing, Contractor acknowledges and agrees that Ordering Activity shall have the minimum restricted rights as set forth in b(4) below.

- (3) Except as is provided in paragraph 8.b(2) above, the Ordering Activity shall not provide or otherwise make available the Software or Documentation, or any portion thereof, in any form, to any third party without the prior written approval of the Contractor. Third parties do not include prime Contractors, subcontractors and agents of the Ordering Activity who have the Ordering Activity's permission to use the licensed software and documentation at the facility, and who have agreed to use the licensed Software and Documentation only in accordance with these restrictions. This provision does not limit the right of the Ordering activity to use Software, Documentation, or information therein, which the Ordering Activity may already have or obtains without restrictions.
- (4) The Ordering Activity shall have the right to use the computer Software and Documentation with the computer for which it is acquired at any other facility to which that computer may be transferred, or in cases of Disaster Recovery, the Ordering Activity has the right to transfer the Software to another site if the Ordering Activity site for which it is acquired is deemed to be unsafe for Ordering Activity personnel; to use the computer Software and Documentation with a backup computer when the primary computer is inoperative; and to copy computer Software for safekeeping (archive) or backup purposes; to modify the software and documentation or combine it with other software, provided that the unmodified portions shall remain subject to these restrictions.

- (5) "Commercial Computer Software" may be marked with the Contractor's standard commercial restricted rights legend, but the schedule contract and schedule pricelist, including this clause, "Utilization Limitations" are the only governing terms and conditions, and shall take precedence and supersede any different or additional terms and conditions included in the standard commercial legend.
- (6) The Software and Documentation hereunder is offered by the Contractor under licenses customarily provided to the public. The Contractor does not furnish technical information related to commercial computer Software (or commercial computer software Documentation) that is not customarily provided to the public. Further, the Contractor does not relinquish rights to use, modify, reproduce, release, perform, display, or disclose commercial computer Software (or commercial computer Software Documentation) except as mutually agreed to by the parties. See 48 CFR 12.212.
- (7) NONDISCLOSURE. Ordering Activity may have access to information that is confidential to Contractor or its Manufacturers ("Confidential Information"). Confidential Information shall include any information that is clearly identified in writing at the time of disclosure as confidential as well as any information that, based on the circumstances under which it was disclosed, a reasonable person would believe to be confidential. Contractor's Confidential Information shall include, but not be limited to, the Software, Documentation, all materials provided to Ordering Activity in the course of performing Maintenance Services hereunder, formulas, methods, know how, processes, designs, new products, developmental work, marketing requirements, marketing plans, customer names, prospective customer names, and the terms and pricing hereunder, regardless of whether such information is identified as confidential. Confidential Information includes all information received from third parties that Contractor is obligated to treat as confidential. Confidential Information shall not include information that (i) is or becomes a part of the public domain through no act or omission of the other party; (ii) was in the other party's lawful possession prior to the disclosure and had not been obtained by the other party either directly or indirectly from the disclosing party; (iii) is lawfully disclosed to the other party by a third party without restriction on disclosure; (iv) is independently developed by the other party without use of or reference to the other party's Confidential Information. In addition, if Ordering Activity recommends to Contractor additional features, functionality, or performance or if Contractor retains generalized information hereunder that Contractor or its Manufacturer subsequently incorporates into its product or service offerings, then with respect to such recommendations and information, Ordering Activity hereby (a) grants Contractor a worldwide, non-exclusive, royalty-free, perpetual right and license to use and incorporate such recommendations and such information into such offerings, and (b) acknowledges that all right and title to such offerings incorporating such recommendations and information shall be the sole and exclusive property of Contractor or its Manufacturer and all such recommendations and information shall be free from any confidentiality restrictions that might otherwise be imposed upon Contractor pursuant to this section. Further, this section will not be construed to prohibit disclosure of Confidential Information to the extent that such disclosure is required by law or valid order of a court or other governmental authority. Ordering Activity shall not disclose the results of any performance tests of the Software to any third party without Contractor's prior written approval. Ordering Activity agrees to hold Confidential Information in confidence and to take all reasonable steps to ensure that Confidential Information is not disclosed or distributed by its employees or agents in breach of these Terms and Conditions.
- (8) VERIFICATION. At Contractor's written request, but not more frequently than annually, Ordering Activity shall furnish Contractor with a document signed by Ordering Activity's authorized representative verifying that the Software is being used pursuant to the provisions of this contract. To the extent permitted by and subject to an Ordering Activity's security requirements (including, but not limited to, use of cleared personnel, badging and other requirements). Contractor reserves the right to audit Ordering Activity's use of the Software no more than once annually at Contractor's expense. Contractor shall schedule any audit at least thirty (30) days in advance. Any such audit shall be conducted during regular business hour at Ordering Activity's facilities and shall not unreasonably interfere with Ordering Activity's business.
- (9) INTELLECTUAL PROPERTY INFRINGEMENT. If a third party makes a claim against Ordering Activity that the Software directly infringes any patent, copyright, or trademark or misappropriates any trade secret ("IP Claim"); Contractor will (i) assist in defending Ordering Activity against the IP Claim at Contractor's cost and expense, and (ii) pay all costs, damages and expenses (including reasonable legal fees) finally awarded against Ordering Activity by a court of competent jurisdiction or agreed to in a written settlement agreement signed by Contractor arising out of such IP Claim; provided that: (i) Ordering Activity promptly notifies Contractor in writing no later than sixty (60) days after Ordering Activity's receipt of notification of a potential claim and (ii) Ordering Activity provides Contractor, at Contractor's request and expense, with the assistance, information and authority necessary to perform Contractor's obligations under this Section. Notwithstanding the foregoing, Contractor shall have no liability for any claim of infringement based on (a) the use of a superseded or altered release of the Software if the infringement would have been avoided by the use of a current unaltered release of the Software, (b) the modification of the Software, (c) the use of the Software other than in accordance with the Documentation or this contract, or (d) any materials or information provided to Contractor by Ordering Activity, for which Ordering Activity shall be solely responsible. If the Software is held to infringe or are believed by Contractor to infringe, Contractor shall have the option, at its expense, to (a) replace or modify the Software to be non-infringing, or (b) obtain for Ordering Activity a license to continue using the Software. If it is not commercially reasonable to perform either of the foregoing options, then Contractor may terminate the Program license for the infringing Software and refund the license fees paid for the Software upon return of the Software by Ordering Activity. This section states Contractor's entire liability and Ordering Activity's exclusive remedy for any claim of infringement.
- (10) DELIVERY. All Software and Documentation provided by Contractor hereunder shall be deemed to be delivered by Contractor: 1) Upon physical delivery, or 2) Once the Software is made available to Ordering Activity via electronic download by provision of a

license key, link to a website, FTP site or similar site from which the Ordering Activity can electronically download or otherwise access the Software and Documentation.

5. Emerging Tools and Technologies	Future innovations

(1) Manage “What is on the network?”

Focus: The primary focus of Manage Assets is to identify “What is on the network?”; that is, to identify the existence of hardware, software, configuration characteristics and known security vulnerabilities.

Manage hardware and software baseline system inventory is based on Phase 1 Hardware Asset Management (HWAM) and Software Asset Management (SWAM) requirements that requires the discovery and identification of devices to define a baseline of inventory hardware and software assets to establish the Agency’s span of control.

Hardware and software configurations are based on Phase 1 Configuration Settings Management (CSM) requirements to ensure that hardware and software (specifically the operating system and installed applications) assets are securely configured and hardened.

Manage vulnerabilities is based on Phase 1 Vulnerability Management (VUL) requirements to identify and manage vulnerabilities in software installed on network devices to minimize exploitation of known software weaknesses.

These CDM capabilities cover verification and validation for the existence of hardware infrastructure devices; the accurate identification of approved software components; verification and validation that hardware devices have the correct security configuration settings, and system platform is hardened to reduce the platform attack surface; and the identification and management of risks presented by known software weaknesses that are subject to exploitation.

These CDM capabilities support the Cybersecurity Framework functions of: identify, protect and detect.

(2) Manage “Who is on the network?”

Focus: The primary focus of Manage People is to determine “Who is on the network?”; that is, identify and determine the users or systems with authorized access.

Manage People is based on Phase 2 PRIV, CRED, TRUST and BEHAVE requirements that require the management of users/accounts as an asset to assure the appropriate individual has the right access to the right resource.

This CDM capability covers the verification and validation of allowed user privileges, issuance and management of user owned credentials, appropriate user security behavior training, trustworthiness, authenticated permissions, and management of resource access rights granted to users.

These CDM capabilities support the Cybersecurity Framework functions of: identify, protect and detect.

(3) Manage “How is the boundary protected?”

Focus: The primary focus of Manage Boundary Protection is to determine “How is the boundary protected?”; that is, to determine the user/system actions and behavior at the physical/logical network boundaries and within the computing infrastructure.

“How is the boundary protected?” is based on Phase 3 BOUND requirements to defend physical and logical network boundaries and identify abnormal behavior (of networks and users) that may identify that an incident has occurred.

This CDM capability covers verification and validation of logical and physical network interfaces to reduce intrusive, malicious, and disruptive attacks; cryptographic mechanisms ensure confidentiality and integrity of data on the network; and methods to identify security incidents.

These CDM capabilities support the Cybersecurity Framework functions of: identify, protect and detect.

(4) Manage “What is happening on the network?”

Due to the complexity to manage “What is happening on the network?”, this area is covered by three focus areas:

- a. Manage Events (MNGEVT)
- b. Operate, Monitor and Improve (OMI)
- c. Design and Build in Security (DBS)

Manage Events

Focus: Manage Events is responsible for preparing for events/incidents, gathering appropriate audit data from appropriate sources, identifying incidents through analysis of data, and performing ongoing assessment.

Manage Events is based on the Phase 3 MNGEVT requirements to prepare for incidents/events (through processes, policies, and procedures), gather appropriate audit/log data from appropriate sources, and identify events/incidents (network and user abnormal behavior) through the analysis of audit/log data.

Manage Events supports the runtime collection of attributes (actual state) and continuous monitoring of the policies related to attributes for Ongoing Assessment (actual state vs. desired state) to enhance current or apply new security and privacy controls and countermeasures. The results of the Ongoing Assessment will be used as inputs to OMI Ongoing Authorization risk assessment process to determine if the level of risk remains acceptable for a given information system to support continued authorization and operation.

Ongoing Assessment is the continuous process of comparing security related attributes between the Actual State and the Desired State. This comparison is performed by the CDM Policy Decision Point (PDP). The discrepancy between Actual State and Desired state impacts the security posture of the implementation of NIST SP 800-53 controls and countermeasures. The results of the Ongoing Assessment are used to evaluate the changes in risk posture associated with the discrepancy. Ideally, the Ongoing Assessment process is fully automated with the Desired State being encoded in the CDM PDP and the Actual State being measured using CDM sensors.

This CDM capability covers verification and validation of processes, policies, and procedures supporting cybersecurity preparation, audit and log data collection, security analysis of audit/log data, incident reporting to provide forensic evidence of malicious or suspicious behavior, and ongoing assessment.

To provide a holistic security approach, this capability adheres to the Cybersecurity Framework security functions to identify, protect, detect, respond and recover CDM also supports and can be used in the NIST Risk Management Framework (RMF) to achieve ongoing assessment and authorization.

Operate, Monitor and Improve

Focus: Operate, Monitor and Improve is responsible for audit data aggregation, correlation, and analysis, incident prioritization and response, and post-incident activities (e.g., information sharing).

Operate, Monitor and Improve is based on Phase 3 OMI requirements for audit data aggregation, correlation and analysis, incident prioritization and response, and post incident activities (e.g., information sharing).

Ongoing Authorization is the continuous evaluation of the change in risk level related to changes in security policies concerning static object attributes (i.e., actual state and desired state) for threat behaviors that impact the security posture. This impact to security is measured by capturing changes in existing safeguards (e.g., NIST SP 800-53 controls and countermeasures) and identification of new component weaknesses and vulnerabilities.

This CDM capability covers verification and validation of processes/procedures to aggregate, correlate, and analyze audit/log data, to prioritize incidents and associated response actions, to quickly mitigate the impact of an incidents, to take appropriate remediation actions to eliminate the impact (restore normal operations) of the same incident, to support information sharing and collaboration (both internal and external) to minimize or prevent impact of future incidents, and ongoing authorization.

To provide a holistic security approach, this capability adheres to the Cybersecurity Framework security functions to identify, protect, detect, respond and recover. CDM also supports and can be used in the NIST Risk Management Framework (RMF) to achieve ongoing assessment and authorization.

Design and Build in Security

Focus: Design and Build in Security is responsible for preventing exploitable vulnerabilities from being effective in the software/system while in development or deployment. The Design and Build in Security process is focused on identifying, controlling and removing weaknesses/vulnerabilities from the software/system. Exploitable vulnerabilities may include software/system design, coding errors, software/system designs that leave a large and complex attack surface that cannot be defended, and weaknesses that can only be exploited during system/software execution.

Design and Build in Security is based on the Phase 3 DBS requirements that extend the focus of Phase 1 Software Asset Management and Vulnerability Management to achieve a level of confidence that software is free from vulnerabilities, either intentionally designed into the software or accidentally inserted at any time during its life cycle and that the software functions in the intended manner.

The U.S. government and critical infrastructure sectors are increasingly dependent on commercial products and systems, which present significant benefits including low cost, interoperability, rapid innovation, a variety of product features, and choice among competing vendors. However, with some of these benefits there is an increase in the risk of a threat event which can directly or indirectly affect the supply chain, which often go undetected, and may result in risks to the acquirer. The purpose of Supply Chain Risk Management (SCRM) is to enable the provisioning of the least vulnerable solutions to agencies, through a robust assessment of supply chain risks, communication about those risks to the agencies, and appropriate response and monitoring of those risks throughout the entire system lifespan.

This CDM capability covers verification and validation of processes/procedures to prevent and detect software vulnerabilities, to determine the provenance of system components, and to measure software assurance for built and acquired software components.

To provide a holistic security approach, this capability adheres to the Cybersecurity Framework security functions to identify, protect, detect, respond and recover to security infractions due to malicious behavior and unintentional user actions during normal operations.

(5) Emerging Tools and Technologies

Focus: Innovative capabilities to cybersecurity not currently encompassed by the other capability areas.
